

Rotary presents new, tablet-driven 3D Wheel Aligner series

Bräunlingen. January 2023 - Rotary, member of Vehicle Service Group (VSG) and leader in the motor vehicle equipment sector, presents the completely tablet-driven 3D wheel aligning systems ROT3D2.0WALL.

The 3D wheel aligners ROT3D2.0WALL are the first products of Rotary's latest series to be launched - *AllOnWall Series*. This new aligner generation allows the creation of a more efficient workshop in terms of both space and operations. It provides a maximization of the available workspace while maintaining a perfect transmission signal at any time.

All alignment activities are completely controlled via a robust 10" tablet, which can be carried around the work bay by the operator obstacle free. The tablet replaces the necessity of any cabinet and thanks to the included adhesive magnets can be stored and recharged at the space saving wall-panel. Besides the storage option, the tablet can also be placed locally at the lift while operations are done. It includes the latest wheel alignment technology and with its multi-touch-display the tablet makes handling the operations easy and comfortable.

The innovative 3D measuring heads instantly read all vehicle angles with maximum precision, providing quick and accurate measurement. The communication works fully wireless via Bluetooth connection, making the presence of data transfer tower or PC completely redundant. The ROT3D2.0WALL also contains a remote assistance, making the aligner even more user-friendly.

Thanks to the Real 3D targets in combination with the self-centering 3-point clamps, the run-out compensation procedure can be skipped to speed up the operator's activity and maximize workshop efficiency. The 3D targets installed on the clamps are extremely lightweight, maintenance-free and have no electronic components.

ROT3D2.0WALL is available in two versions:

- Large version with self-centering 3-point clamps.
- Light version combinable with 4- or self-centering 3-point clamps.

Both versions include a panel that offers dedicated space to store the tablet as well as the 3D measuring heads and includes the matching charging devices, so they are ready for use at any time. The Large version offers space to store the clamps right next to the panel to have all the equipment at a single area without occupying additional room. The Light version gives the opportunity to install the hooks for the clamps separately at any place in the workshop.

The space saving, attractive design with the iconic Rotary logo compliments the innovative system and with the portable, extremely lightweight tablet makes it a perfect use for daily alignment operations. It allows maximization of the available workspace, a perfect transmission signal at any time, minimum effort thanks to no run out compensation and one aligner can be used for multiple working bays.
